-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

Art Unit: 3753

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6, and 23-27 are rejected under 35 U.S.C. 102(b) as being anticipated by Shames. Shames shows a flow washer 23' (Fig. 5) upstream from a venturi 43d, which admits ambient air. Bar 14'a is included to reduce noise. With respect to the noise reduction language (claims 1 and 24), in claim 1 it is seen as merely a desired result. Claim 24 uses a means plus function construction. However, since the same structural limitations are found in Shames, there is no reason to expect noise suppression by means of the air venturi in Shames. The fact that Shames relies on bar 14a for noise suppression does not mean the venturi does not also suppress noise. In claim 3, the venturi tapers inwardly (reducing cross sectional area) at surface 43d, and expands outwardly (increasing in area) along the outer surface of 43b below the venturi throat.

Claims 9-11 and 28-30 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 7-8, 12-22 are allowed.

Art Unit: 3753

Applicant's arguments, with respect to Brane have been fully considered and are persuasive. The rejections using Brane are withdrawn.

Applicant's arguments filed with respect to Shames have been fully considered but they are not persuasive. Element 24' is a flow control washer, with the intent to stabilize flow with respect to inlet pressure variations.. See col. 3, lines 41-49 and col. 4, lines 35-41.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
